## **ABSTRACT OF THE DISCLOSURE**

A composition for preparing breathable films. The composition comprises a bimodal polyethylene composition, a particulate filler, and, optionally, an olefin-based polymer. The bimodial polyethylene composition has a melt flow rate MFR<sub>2</sub> of 0.1 to 4 g/10 min. and a density of 918 to 935 kg/m $^3$ . The olefin-based polymer can be, e.g., polypropylene. The films prepared from the composition have a very high water vapour transmission rate, exceeding 3000 g/m $^2$ /24 hours.
